# Wontok SafeCentral Mobile Security

Three in One - Complete Mobile Privacy and Security for Android Devices

Wontok SafeCentral for Android provides mobile browsing peace of mind, protecting your privacy and keeping you safe from malicious attacks and cyber threats.

+ Malware   + Malicious apps   + Spyware   + Ransomware

+ SMS Trojans   + Keyloggers   + DNS hijacking

3 IN 1 INTEGRATED SECURITY

SAFEBROWSER

ANTI-MALWARE

SAFEDESKTOP

Secure Browser

Locked-down SafeBrowser protects users from malicious plugins, drive-by-downloads and phishing websites.

Anti-Malware

Antivirus and web security. In-the-cloud scanning technology quickly scans application files during install or on-demand and detects the latest threats (viruses, Trojans and potentially malicious applications).

SafeDesktop Kiosk Mode

Protect your online banking sessions. Locked-down SecureMode restricts access to only approved applications and settings.

The Wontok Mobile Security Difference

Flexible App Checking

Automated, on-demand, or on-install scanning. Protects against compromised or malicious applications that could contain Trojans and other viruses.

Real-time Anti-Malware Protection

Advanced in-the-cloud threat protection to detect and log the latest threats targeting the Android device.

Malware Removal

Users are alerted and prompted to remove malicious apps automatically.

Locked Down Secure Environment

Go beyond standard anti-malware protection with SafeDesktop, which is a protected mode that reduces risk from third-party keyloggers and screen capture applications and execution of unauthorised applications. While in SafeDesktop, external apps running in the background cannot communicate with Apps running in SafeDesktop.

Battery Integrity

Lightweight application provides constant protection without straining the device battery.
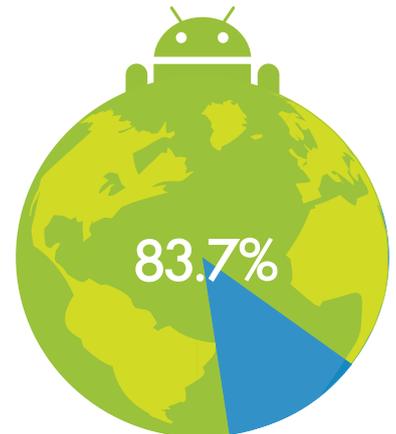

Keep your Android Devices Safe from Attack

+ Easy to use

+ Real-time malware protection

+ Fast In-the-cloud scanning

+ No impact to mobile experience

+ Privacy protection

+ Won't drain your battery

Minimum System requirements: Android 4+

Android devices represent 83.7%[1] of the worldwide smart mobile device market.

By 2020, experts anticipate that there will be 1.84 billion new smartphones users worldwide[2], of that there will be 1.60 billion Android devices.

The popularity of Android's open, developer-friendly ecosystem has introduced numerous opportunities, as well as challenges and vulnerabilities ranging from nuisance apps to identity theft and fraud. Enterprise BYOD trends mean IT teams continue to struggle with the growing number of unprotected endpoint devices that add risk to corporate networks and data.

83.7%

50%

"50% of companies will require employees to provide their own devices for their jobs by the year 2017"[3]

Given the massive growth of Android, the emergence of BYOD in the enterprise, and the increasing reliance on mobile devices for mobile and remote workforce, it's no surprise that Android has become the leading mobile target for cybercriminals.

50%

Overall of 2015, there was an increase in mobile malware spotting of over 50% in comparison to 2014."[4]

This Q1 of 2016, 50%[5] of organizations either didn't have policies or depended on the user to comply with corporate policies for securing personally owned device. In this new survey on BYOD policy and controls, more than 95% of respondents said that policy is a critical protection that needs to be integrated into overall risk management policy.
